Global Companies Performance & Market Valuation Dashboard

Final Data Analytics Project Report | Microsoft Excel | Market snapshot: 31 August 2026

1. Executive Summary

This project analyses 95 major global companies using a Microsoft Excel dashboard that brings together company valuation, revenue, profitability, workforce size, sector and country. It combines five summary KPIs with six comparative charts and two interactive slicers to communicate major patterns in the selected dataset. The dataset source-tracking sheet records a 31 August 2026 market-capitalisation snapshot, supported by company annual reports or investor-relations disclosures for other indicators. The analysis is descriptive: it highlights differences in scale and performance rather than predicting future results.

2. Project Objective

The objective is to compare leading companies by market value, revenue and profit margin; assess how market value is distributed across industry sectors and countries; and let users focus on particular market segments through sector and country filters.

3. KPI Summary

Performance indicator	Displayed value	Interpretation
Total companies	**95**	Number of companies included in the dashboard.
Total market capitalisation	**$63.13 trillion**	Combined valuation measure reported for the selected companies.
Total revenue	**$11.37 trillion**	Aggregate reported revenue across the analysed companies.
Average profit margin	**27.7%**	Displayed average profit margin across the company sample.
Total employees	**14.59 million**	Combined headcount reported for the companies.

Leading companies and categories

Dashboard indicator	Leader	Category represented
Highest market valuation	**NVIDIA**	Company by reported market valuation
Leading industry sector	**Technology**	Industry with highest aggregate valuation
Leading country by market value	**United States**	Country with highest aggregate valuation
Highest reported revenue	**Amazon**	Company by reported annual revenue
Highest profit margin	**NVIDIA**	Company by reported profit margin

4. Dashboard Overview

The Excel dashboard combines five headline indicators, six comparative charts and two interactive slicers into a single analytical view. The image below is taken from the supplied report screenshots.

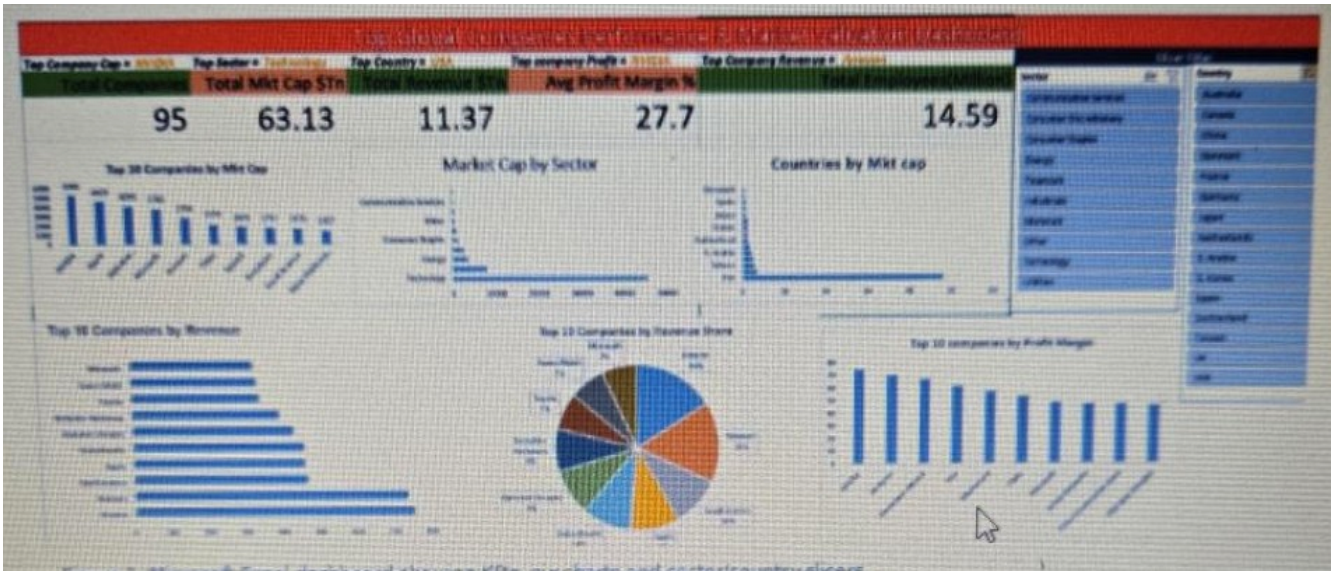

Figure 1. Microsoft Excel dashboard showing KPIs, six charts, and sector/country slicers.

5. Chart-by-Chart Analysis

01 Top 10 Companies by Market Capitalisation

A vertical column chart ranks the highest-valued companies. NVIDIA leads, followed by Apple, Alphabet, Microsoft and Amazon. TSMC, SpaceX, Broadcom, Saudi Aramco and Meta Platforms also appear in the top ten.

> **Analytical insight:** *The leading positions are concentrated among technology and technology-related businesses. Market value is not the same as annual sales or profit.*

02 Market Capitalisation by Sector

A horizontal bar chart aggregates the selected companies by industry classification. Technology has by far the largest total in the chart, with Energy and the remaining sectors contributing smaller amounts.

> **Analytical insight:** *The market value of this company sample is heavily concentrated in Technology. This is a dataset-level observation, not a claim about every company or market worldwide.*

03 Countries by Market Capitalisation

A horizontal bar chart groups company market value by country. The United States dominates the displayed values, followed at a considerable distance by contributions from other represented countries.

> **Analytical insight:** *The dataset is geographically concentrated in US-associated companies. These totals reflect the selected companies, not complete national stock-market values.*

5. Chart-by-Chart Analysis (continued)

04 Top 10 Companies by Revenue

A horizontal bar chart ranks companies by annual revenue in the source dataset. Amazon leads, closely followed by Walmart. Saudi Aramco, Apple, UnitedHealth, Alphabet and Berkshire Hathaway are also among the major contributors.

> **Analytical insight:** *Amazon leads revenue while NVIDIA leads market valuation. High sales do not automatically produce the highest market value or profit margin.*

05 Top 10 Companies by Revenue Share

A pie chart shows each of the ten revenue leaders as a share of their combined revenue. Amazon and Walmart contribute approximately 16% each; Saudi Aramco, Apple and UnitedHealth contribute about 10% each.

> **Analytical insight:** *Amazon and Walmart together account for about 32% of the revenue of this top-ten group. Pie-chart shares are not percentages of the entire 95-company dataset.*

06 Top 10 Companies by Profit Margin

A vertical column chart compares the highest profit margins. NVIDIA ranks first, followed by SK Hynix, Kweichow Moutai, Visa and Mastercard.

> **Analytical insight:** *Profit margin measures the proportion of revenue retained as profit. It offers a different perspective from total revenue or company market value.*

6. Interactive Slicers

Sector slicer. Allows users to select industries such as Technology, Energy, Financials, Industrials or Consumer Staples. It supports focused comparison of companies within one or more sectors.

Country slicer. Allows users to focus on countries such as the USA, UK, China, Japan and Taiwan. It supports geographical comparison of the metrics represented in connected dashboard charts.

Combined selections. Applying a sector and country selection together narrows the analysis to companies belonging to the chosen industry and location, where those selections intersect.

7. Excel Analysis Workflow

Data organisation: The workbook displays separate worksheets for raw data and a cleaned 95-company dataset, keeping reporting inputs distinct from the dashboard.

Aggregation: PivotTable and chart analysis sheets organise company-level data into rankings and totals by company, sector and country.

KPI reporting: A dedicated KPI data worksheet provides the summary metrics presented in the dashboard.

Visual presentation: The dashboard assembles five KPI cards, six charts and two slicers into one analytical view.

8. Principal Findings

1. Technology has the largest aggregate market value among the sectors shown.
2. US-associated companies account for the greatest total market value in the country comparison.
3. NVIDIA leads the market-valuation and profit-margin rankings in the dashboard.
4. Amazon leads revenue, illustrating that sales leadership and valuation leadership are different.
5. The top-ten revenue chart shows significant contributions from retail, energy, healthcare and technology businesses.

9. Scope and Limitations

The results describe a selected group of 95 companies rather than the entire global corporate universe. The source-tracking columns identify CompaniesMarketCap company pages for a 31 August 2026 market-valuation snapshot, and official company annual reports or investor-relations disclosures for annual financial information. The annual metrics may cover different reporting years and are not necessarily measurements from the valuation snapshot date. The source status also refers to TTM operating margin, while the dashboard uses the label profit margin; these terms are not always interchangeable and the exact calculation is not established by the screenshots. Some companies may have private-market valuations rather than publicly traded market capitalisations. Country and sector rankings depend on the classifications used, and the average margin weighting is not specified.

10. Conclusion

The dashboard brings together valuation, revenue, profitability and employment information in an accessible Excel report. The clearest findings are the concentration of market value in Technology and US-associated companies, NVIDIA's leadership in valuation and margin, and Amazon's leadership in sales. The combination of summary indicators, comparative charts and slicers demonstrates a practical approach to exploratory financial analysis and interactive business reporting.

11. Data Sources and References

The source-tracking columns supplied with the dataset identify CompaniesMarketCap as the source for company-level market valuations, with an as-of date of 31 August 2026. Annual financial and company data are attributed to official company annual reports or investor-relations disclosures, using the latest completed annual disclosure retained from earlier data enrichment. The Data Status column describes the combination as *"31 Aug 2026 market-cap snapshot + current TTM operating margin + latest annual/company disclosure."*

Reference	Description	Source URL / disclosure note
[1] Market valuation source	CompaniesMarketCap company profiles; 31 August 2026 snapshot	https://companiesmarketcap.com/
[2] Annual financial data	Official company annual reports and investor-relations disclosures; company-specific reporting periods	As described in source dataset; individual report URLs not supplied
[3] NVIDIA source URL	Market valuation company profile, visible in source worksheet	https://companiesmarketcap.com/nvidia/
[4] Apple source URL	Market valuation company profile, visible in source worksheet	https://companiesmarketcap.com/apple/
[5] Alphabet source URL	Market valuation company profile, visible in source worksheet	https://companiesmarketcap.com/alphabet-google/

[7] Amazon source URL	Market valuation company profile, visible in source worksheet	https://companiesmarketcap.com/amazon/

Data Coverage and Periods

Date-period interpretation: Market valuations refer to the 31 August 2026 snapshot. Annual disclosures and trailing-twelve-month (TTM) operating margin may refer to different periods. The market-source URLs are preserved in the original dataset at company level. References [3]-[7] are representative examples visible in the supplied source-tracking screenshot, not an exhaustive list of all 95 companies.

Source documentation: The supplied data-source worksheet screenshot shows columns titled As-of Date, Market Source URL, Annual Data Source and Data Status. This report follows the supplied screenshots; values have not been independently verified.
